DETAILED ACTION

Claims 1-2 are presented for examination.

Specification

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or

REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP.§ 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)

- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (I) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Art Unit: 2876

Content of Specification

(a) <u>Title of the Invention</u>: See 37 CFR 1.72(a) and MPEP § 606. The title of the invention should be placed at the top of the first page of the specification unless the title is provided in an application data sheet. The title of the invention should be brief but technically accurate and descriptive, preferably from two to seven words may not contain more than 500 characters.

Page 3

- (b) <u>Cross-References to Related Applications</u>: See 37 CFR 1.78 and MPEP § 201.11.
- (c) <u>Statement Regarding Federally Sponsored Research and Development:</u> See MPEP § 310.
- (d) The Names Of The Parties To A Joint Research Agreement: See 37 CFR 1.71(g).
- (e) Incorporation-By-Reference Of Material Submitted On a Compact Disc:
 The specification is required to include an incorporation-by-reference of electronic documents that are to become part of the permanent United States Patent and Trademark Office records in the file of a patent application. See 37 CFR 1.52(e) and MPEP § 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text were permitted as electronic documents on compact discs beginning on September 8, 2000.

Or alternatively, Reference to a "Microfiche Appendix": See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.

- (f) <u>Background of the Invention</u>: See MPEP § 608.01(c). The specification should set forth the Background of the Invention in two parts:
 - (1) <u>Field of the Invention</u>: A statement of the field of art to which the invention pertains. This statement may include a paraphrasing of the applicable U.S. patent classification definitions of the subject matter of the claimed invention. This item may also be titled "Technical Field."
 - (2) <u>Description of the Related Art including information disclosed under 37 CFR 1.97 and 37 CFR 1.98</u>: A description of the related art known to the applicant and including, if applicable, references to

Art Unit: 2876

specific related art and problems involved in the prior art which are solved by the applicant's invention. This item may also be titled "Background Art."

Page 4

- (g) Brief Summary of the Invention: See MPEP § 608.01(d). A brief summary or general statement of the invention as set forth in 37 CFR 1.73. The summary is separate and distinct from the abstract and is directed toward the invention rather than the disclosure as a whole. The summary may point out the advantages of the invention or how it solves problems previously existent in the prior art (and preferably indicated in the Background of the Invention). In chemical cases it should point out in general terms the utility of the invention. If possible, the nature and gist of the invention or the inventive concept should be set forth. Objects of the invention should be treated briefly and only to the extent that they contribute to an understanding of the invention.
- (h) <u>Brief Description of the Several Views of the Drawing(s)</u>: See MPEP § 608.01(f). A reference to and brief description of the drawing(s) as set forth in 37 CFR 1.74.
- (i) Detailed Description of the Invention: See MPEP § 608.01(g). A description of the preferred embodiment(s) of the invention as required in 37 CFR 1.71. The description should be as short and specific as is necessary to describe the invention adequately and accurately. Where elements or groups of elements, compounds, and processes, which are conventional and generally widely known in the field of the invention described and their exact nature or type is not necessary for an understanding and use of the invention by a person skilled in the art, they should not be described in detail. However, where particularly complicated subject matter is involved or where the elements, compounds, or processes may not be commonly or widely known in the field, the specification should refer to another patent or readily available publication which adequately describes the subject matter.
- (j) Claim or Claims: See 37 CFR 1.75 and MPEP § 608.01(m). The claim or claims must commence on separate sheet or electronic page (37 CFR 1.52(b)(3)). Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation. There may be plural indentations to further segregate subcombinations or related steps. See 37 CFR 1.75 and MPEP § 608.01(i)-(p).
- (k) Abstract of the Disclosure: See MPEP § 608.01(f). A brief narrative of the disclosure as a whole in a single paragraph of 150 words or less commencing on a separate sheet following the claims. In an international application which has entered the national stage (37 CFR 1.491(b)), the

Art Unit: 2876

applicant need not submit an abstract commencing on a separate sheet if an abstract was published with the international application under PCT Article 21. The abstract that appears on the cover page of the pamphlet published by the International Bureau (IB) of the World Intellectual Property Organization (WIPO) is the abstract that will be used by the USPTO. See MPEP § 1893.03(e).

(I) <u>Sequence Listing.</u> See 37 CFR 1.821-1.825 and MPEP §§ 2421-2431. The requirement for a sequence listing applies to all sequences disclosed in a given application, whether the sequences are claimed or not. See MPEP § 2421.02.

Claim Objections

Claim 1 is objected to because of the following informalities: Claim 1 does not end with a period. Appropriate correction is respectfully required.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 2 is rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Accordingly, the descriptions of the method of performing ATP operation at the slower rate, the steps of calculating the average time of each transaction using a standard deviation two times below the mean which are critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

Art Unit: 2876

For the purpose of this Office Action, since the limitations of the claims are not clearly understood, the claimed transaction time period is considered as a delayed transaction time.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Art Unit: 2876

Ú

Claims 1-2 are rejected under 35 U.S.C. 102(e) as being anticipated by Brown et al. (Brown et al. – 6,679,422; herein after referred to as Brown).

Regarding claim 1, Brown discloses "an automatic teller system and a method of operating the system wherein the system can receive a personalized normal PIN or duress PIN from a user. If the user enters the duress PIN, the system determines that it is a duress PIN and actuates a silent alarm to notify authorities of the possible crime. The system will then simulate a normal transaction, perhaps with a reduced maximum withdrawal amount, so as to not alert a thief or potential thief that the alarm has been actuated, while dispensing bills marked with special ink that is visible only when viewed under special light. Also, the serial numbers of the bills dispensed under duress are recorded by the automatic teller system and automatically communicated to authorities. Under duress conditions, it is preferable that the monitoring of the ATM be enhanced." (see abstract).

Figure 1 of Brown shows an automatic teller machine (ATM) 12 that includes a magnetic strip or microchip embedded card reader 14, a user keypad 16, a display 18 and a cash dispenser 20. The system also includes a central computer 22 that receives the information read from the card reader 14 and personal identification numbers entered on keypad 16 by the card user. The computer 22 also prompts the user or provides information to the user via display 18, and actuates cash dispenser 20 to dispense cash to the user. (see the descriptions of figure 1).

Brown further discloses that "optionally, the central computer 22 is electronically coupled to an optical scanner 24 and uses optical character recognition (OCR) technology which is capable of identifying bills dispensed from the ATM, for example to determine and

Art Unit: 2876

record the serial number on each dispensed bill after a user enters a duress PIN. The central computer 22 also includes or is in communication with a serial number database 32 for storing and retrieving serial numbers of currency that has been deposited into or dispensed from the ATM 12. The central computer 22 also has direct or indirect communication with a security system 26, preferably including at least a camera 28 and a silent alarm 30. (col. 3, lines 10-68).

According to Brown, "if the central computer 22 determines in step 64 that the PIN entered by the user is a duress PIN associated with the identified account, then the central computer 22 acts to perform certain duress-specific functions. The first duress-specific function occurs in step 68. In step 68, the central computer 22 activates a silent alarm 30 and in step 70, the central computer 22 notifies appropriate authorities that a potential theft or assault is occurring at the specific location of the ATM. In step 72, the central computer activates camera 28 to video-record the location at the ATM or to enhance normal filming, such as by obtaining a close up of the location or increasing the number of frames per second that are recorded, and perhaps recording audio during and after the duress transaction takes place. Optionally, upon receiving the duress PIN, a second camera could also be used or the audio/video signal could be patched through to an alarm monitoring service. In step 73, the system delays the withdrawal process for a preset time period in order to keep the thief at the scene longer while the authorities, having received the silent alarm, are rushing to the scene. A preferred means of delay is to stream advertising onto the display in a manner that appears normal, such as by advertising refinance or credit offers of the bank that owns the ATM. The duress process performed by the central computer 22 is intended to simulate a normal ATM withdrawal and to

thereby avoid alerting the potential thief that the silent alarm 30 has been activated. Referring to FIG. 2B, this simulation of a normal withdrawal is emphasized by aligning the steps 74 through 84 of the duress process on the left side of the chart with the steps 52 through 62 of the normal process on the right side of the chart. While there are actual differences in the two processes, the differences are not observable to anyone at the ATM." (see col. 4, lines 1-50)

As can be seen, Brown discloses a method of allowing a user to input a duress PIN number, the method of activating silent alarm, informing bank's authorities and law enforcements, delaying transaction time, recording time, date, dispensed bill's numbers and other information; and thus would meet all limitation set forth in this claim.

Regarding claim 2, see the discussions regarding claim 1. Specifically, see figure 2B and its description for method step 73 wherein the transaction time is purposely delayed for a predetermined amount of time while law enforcements and other security procedures are being conducted.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thien M. Le whose telephone number is (571) 272-2396. The examiner can normally be reached on Monday - Friday from 7:30am - 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Lee can be reached on (571) 272-2398. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
